

Bomba® and Adrenabloom® Instructions

- Use 10 ml of Bomba® or Adrenabloom® per 1 litre of water (5 ml per half litre, 2 ml per 200ml water etc...)
- Only make up enough as required! Do not make up a litre if you only have a small area to spray!
- Spray once per week only and alternate between Bomba® and Adrenabloom®
(For best bloom results use Bomba® for last 2 weeks of Grow and for the first 2 weeks of Bloom)
- Spray as lights come on, if lights are already on turn half of them off so you do not shock your garden!
- Spray your garden from Week 1 of grow right through till Week 7 of Bloom
- Turn oscillating fans off when spraying but leave extraction fans on!
- Leave spray to soak in for 30 minutes before turning all your lights back on
- These products work best in conjunction with a wetting agent such as WetDream®, ask in store
- Sit back and relax!

ALASKAN SILICA PRO® DIRECTIONS, IMPORTANT !!!!!!!!!

- Fill tank with water only
- Add 30 ml Alaskan Silica Pro® per 100 litres of water, your PH will rise to around 10
- Add 15-20ml of PH down , this should bring your PH down to around 6
- Add all your additives and base nutrient
- Check PH again and set to 5.5 for grow and 5.8 -6.3 for bloom

Cropash2® super stack mode

- When your flowers have reached week 5, decrease the strength of your base nutrient by half so that your EC is between 1.2 & 1.4
- Add 2ml of Cropash2® per litre of nutrient, this will make flowers get very fat and heavy but you must flush your system every 3-4 days
- Repeat this process till end of bloom
